

Project Initialization and Planning Phase

Date	06 July 2026
Team ID	TMID-SL-2026-01
Project Name	SmartLender - Applicant Credibility Prediction for Loan Approval
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template)

Create a problem statement to understand your customer's point of view, in the format: "I am <customer>, trying to <need>, but <constraint>, because <cause>, which makes me feel <emotion>."

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A salaried male applicant seeking a home loan	secure a loan for the property	married with no co-applicant income	self-employed with a good credit history	optimistic about loan approval
PS-2	A self-employed applicant with irregular income	get quick approval on a personal loan	has no recorded credit history	the bank has no automated way to assess risk quickly	anxious about long manual review
PS-3	A credit officer handling dozens of applications daily	approve or reject loans fairly and fast	manual review is slow and inconsistent	there is no data-driven scoring tool available	overwhelmed and worried about human bias
PS-4	A financial analyst reviewing a high volume of applications	batch-screen applicants for risk	spreadsheets don't scale to large applicant pools	there is no predictive model integrated into the workflow	frustrated by repetitive manual work
