

Empathy Map

Date	06 July 2026
Team ID	TMID-SL-2026-01
Project Name	SmartLender - Applicant Credibility Prediction for Loan Approval
Maximum Marks	4 Marks

Create an empathy map to understand your customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem your project addresses.

SAYS • "I need to know within minutes if this applicant is likely to repay." • "Half my day goes into manually cross-checking income and credit history." • "I don't want to reject a good applicant just because the paperwork looks thin."	THINKS • This process should be faster and more consistent across reviewers. • A data-backed second opinion would reduce my risk of a bad call. • I worry about approving someone who later defaults.
PERSONA Credit Officer (Role: front-line loan reviewer)	
DOES • Manually checks income, credit history, and property details for every application. • Cross-references applicant claims against submitted documents. • Escalates unclear cases for further scrutiny.	FEELS • Overwhelmed during high-volume periods. • Uncertain when signals conflict (e.g., good income, no credit history). • Relieved when a clear, confident recommendation is available.
