

Problem-Solution Fit Canvas

Date	06 July 2026
Team ID	TMID-SL-2026-01
Project Name	SmartLender - Applicant Credibility Prediction for Loan Approval
Maximum Marks	5 Marks

Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience.

1. Customer Segment(s) Credit officers / financial analysts at banks and NBFCs; loan applicants (salaried and self-employed).	6. Customer Limitations Officers face high application volume and time pressure; applicants may lack complete documentation or credit history.	5. Available Solutions (Pros/Cons) Manual underwriting (thorough but slow, inconsistent); generic scorecards (fast but not tailored to the institution's data).
2. Problems / Pains + Frequency Slow, inconsistent manual review; every application, daily.	9. Problem Root Cause No automated, data-driven scoring step before manual review.	7. Behavior + Intensity Officers manually cross-check income, credit history and documents for every case — high effort, repeated constantly.
3. Triggers to Act A backlog of pending applications or a rise in loan defaults prompts the team to seek faster, more consistent screening.	10. Your Solution ML-based eligibility prediction (XGBoost) served through a Flask web app, giving an instant Approved/Rejected read with a confidence score.	8. Channels of Behavior Online: Smart Lender web form. Offline: physical documents cross-checked before final sign-off.
4. Emotions Before / After Before: anxious, overwhelmed. After: more confident, faster to a decision.
